

APPLIED STATISTICS EDUCATION AND RESEARCH COLLABORATION (ASEARC)

ASEARC (The Applied Statistics Education and Research Collaboration) is a major project that involves NIASRA and the 4 centres as well as the education services associated with the School of Mathematics and Statistics (SMAS). The project was established to develop effective collaboration between statistics groups at the universities of Newcastle, Wollongong and Western Sydney. The aim of the project is to jointly develop and deliver subjects and courses, form a graduate program to improve the research environment for Higher Degree Research students, improve research at each institution by operating as a research centre, and enable increased consulting and training by creating a larger pool of staff and skills available for industry.

In practical terms, the project aims to deliver tuition by subject matter experts to other participating institutions through interactive media, provide mentoring to other staff from subject matter experts, explore opportunities offered by new technology for the storage, exchange, and delivery of information and data amongst the participating institutions, and increase consultancy prospects through greater knowledge and expertise.
