

## **SPATIO-TEMPORAL STATISTICS NSF-CENSUS RESEARCH NETWORK (STSN) AT THE UNIVERSITY OF MISSOURI**

STSN is funded by the US National Science Foundation and the US Census Bureau. It is comprised of a team of investigators conducting interdisciplinary research on methodological questions that are important to the U.S. Census Bureau, the Federal Statistical System, as well as the larger social science and statistics research community. The primary foci of STSN are research and education. From both perspectives, STSN will advance fundamental research and applied scientific knowledge through the use of hierarchical spatio-temporal statistical modeling.

For further information, contact [Distinguished Professor Noel Cressie](#).
